

CASE STUDY

VISTAKULLE VINEYARD & ORCHARD

„FläktGroup has met and even exceeded my expectations.“
- Fredrik Knutsson, Owner

About the Project

The Vistakulle Vineyard & Orchard in Jönköping is expanding its offering with a modern conference and event space to meet the growing trend in hospitality. In addition to wine tastings, the new space will be used for meetings and events in the future.

In collaboration with FläktGroup, a suitable air handling solution was implemented. The system is controlled and visualized by our DDC in combination with HMI Web 7, ensuring intuitive operation and full transparency of all system conditions.

The close coordination between plant engineering, ventilation technology, and building automation enabled efficient implementation and resulted in a perfectly integrated overall system.

Why this solution was chosen

The key factor was the combination of high-performance ventilation technology from FläktGroup and flexible building automation from SE-Elektronik. The DDC ensures energy-efficient and reliable operation, while HMI Web 7 enables simple and transparent control. This was complemented by close collaboration between all parties involved and a fast, solution-oriented implementation.

Project Name:

Vistakulle Vineyard & Orchard – Conference room solution with FläktGroup and SE-Elektronik

Location:

Jönköping, Sweden

Goals:

- Creation of a comfortable conference room for year-round use
- Expansion of offering in the hospitality and events sector
- Fast delivery and commissioning of the technical solution

Benefits

- Optimal indoor climate for events and meetings
- High energy efficiency through precise control via SE-DDC
- Future-proof system architecture thanks to open, integrated solutions
